ESCALDES-ENGORDANY

After searching all last Tuesday afternoon for the Caldes project worker who had fallen into the river in the Escaldes-Engordany area, the rescue team made up of the Police and Fire Brigade found the man's body death between the Madrid bridge and the Margineda bridge around 8.15pm. The strength of the river flow as a result of the rains of the last few days led to the rescue tasks being slowed down, leading to the body descending at high speed throughout the Valira river.

The warning was received at 3:10 p.m., when a citizen alerted

ted that a person had fallen into the river, moving both the Poli-

ce and Firefighters to the scene to perform rescue tasks. Appa-

rently, the 57-year-old injured man was working on the Caldes project, when the ground gave way and he would have been unconscious after hitting his head after falling, being dragged by the water force. Everything seemed to point to the worst-case scenario, as it had been se-

The strength of the river's flow as a result of the recent rains complicated the rescue tasks

en in horror by some witnesses in the area. From the first moment, the emergency services launched all available resources to locate the worker with the collaboration of the SUM, the traffic services of Escaldes-Engordany, Andorra la Vella and Sant Julià de Lòria, as well such as the Generalitat Fire Brigade and the Mossos d'Esquadra from the other side of the border. From the moment that the Interior Attaché and the Interior Minister of the Spanish Embassy in Andorra were informed, they immediately made themselves available to the operative if necessary. The collaboration of FEDA was also key, which reduced the flow of water to facilitate the rescue tasks, which culminated shortly after 8:00 p.m., when the helicopter located the body. ●

A tourist car slips and crashes in a car park in the capital

The driver of the vehicle saw how her car was stuck between two ramps

Around 08:00 on Tuesday morning, the driver of a car with Andorran registration suffered an accident in a car park in Andorra la Vella, after crashing her vehicle against the railing of one of the floors of the parking lot in question. At the time when the Fire Department was informed and they came to provide the

relevant assistance, the vehicle with the driver was trapped between two ramps. This one seems not to have suffered any kind of damage, regretting only those materials.

As for the causes that led to the accident, it seems that the water on the floor and the wet wheels were the two factors that contributed to the situation, when the woman lost control of the vehicle and had no room to react to be able to renew the direction. An assistance vehicle was also dispatched to the scene to remove the car. ●
