### 310 violations for speeding on Sant Julià avenue

There are pedagogical radars that warn of the obligation to drive 50 kilometers

The police continue to record speeding violations on Sant Julià de Lòria road. Since its implementation three years ago, the problem still continues despite the fact that drivers are aware that the police carry out occasional mobile checks and that, in addition, the Lauredian community and the Government installed educational radars in the area that they remind vehicles of the obligation not to drive at more than 50 kilometers per hour.

In this way, and despite the mea-

sures implemented, the law enforcement body has reported that between January 2nd and May 9th of this year, up to 310 speeding violations have been detected on the new road. In addition, they add that the

speeds of the vehicles, which ignore the pedagogical radar, have been between 75 and 111 kilometers per hour, which means, in many cases, exceeding twice the legally permitted speed in this stretch. Although it is not possible to compare the data in a concise manner with respect to previous years, since the violations are ascertained through spot checks that have not always been carried out during the same period, it should be noted that between January and August 2022, 274 fines were issued during 29 speed checks. Likewise, between May and August, the number of sanctions rose to 86.

However, it seems that the data, far from being reduced, maintains a constant increase over time. It is therefore expected that the police will continue to carry out these mobile controls on a timely basis with the aim of detecting and penalizing vehicles that exceed, by far, the permitted speed. ≡
